RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 56 pages. Original publisher: Golden, Colo. : National Renewable Energy Laboratory, 2006 OCLC Number: (OCoLC)191734869 Subject: Optical radar -- Research. Excerpt: . . . Figure 4. Polar plot of line-of-sight velocity component in m s versus azimuth scan angle. White squares: 75 measurements obtained over 3 seconds. Continuous curve: best-fit solution. Bold line from origin: upwind bearing. The excellent fit indicates uniform flow across the scanned area. Note also a slight asymmetry in the lobe sizes, indicating a small vertical component to the wind velocity. By adjusting the focus, wind measurements can be made at all heights from 5 m to 150 m above ground level. Lidar Cup 100 m, 21 August 2004 20 15 Lidar 10 5 y 1. 0038x 0. 0793 R2 0. 9883 0 10 15 20 0 5 Cup Figure 5. Regression plot of 10-minute averaged wind speed 100 m above ground in m s, measured by lidar and calibrated cup anemometer. The lidar was situated 120 m from the base of the mast. The measurements were obtained over a 24-hour period when there was little risk of shadowing of the cup (by the mast or by adjacent turbines). The corresponding plots at other heights (40 m, 60 m, 80 m) display similarly good agreement and correlation. The experience QinetiQ has gained with ZephIR and other related systems forms the basis for much of the detailed analysis of options presented in the following sections. 8 This item ships from La Vergne,TN. Paperback.
