If the lower plate is constructed from a single lamina of gold, or other metal, it should be somewhat thicker than that used in upper cases, and should also be of finer quality, as the additional thickness of the plate and the peculiar form of the inferior maxilla, renders a greater Fm 75 degree of pliancy necessary in swag ing it to the form of the ridge. The general form of a base for an entire lower denture is exhibited in Fig. 75. The internal border of the plate should usually be doubled, - either by turning the edge over in swaging. or by soldering on a narrow strip of plate or half-round wire. A more perfect adaptation of the plate to the ridge may be obtained by the use of a double instead of a single...
